Ultra-violet and visible spectroscopy Samples must always be clear solutions as particles will scatter the incident light and therefore give erroneous results.

[Sample Preparation for NIR Analysis | Spectroscopy](#)

A much discussed issue related to near infrared analysis (NIR) is the necessity of sample preparation. Ground and unground samples of wheat were analyzed to determine how truly necessary it is to homogenize samples before NIR analysis.

Uv vis spectroscopy practical. - SlideShare

UV-Vis spectroscopy is routinely used in analytical chemistry for the quantitative and qualitative determination of different analytes, such as transition metal ions, highly conjugated organic compounds, and biological macromolecules. Spectroscopic analysis is commonly carried out in solutions but solids and gases may also be studied. The ultraviolet region (about 400-190) is particularly
