Neonatal Immunology | British Society for Immunology

Development of the immune system In many ways the immune system we are born with is the product of the immune environment during pregnancy. In order to maintain the foetus the mother needs to ignore the foetal alloantigens (half of the antigens being of paternal, and therefore of foreign origin). This leads to a scenario of immunosuppression

The development of the immune system during pregnancy and ...

Development of the fetal immune system. As in all mammals, the first stage of human fetal haemo poiesis occurs in the mesoderm of the yolk sac and the extraembryonic mesenchymal tissue. Pluripotent erythroid and granulomacrophage progenitors can be detected in the yolk sac of human embryos at 3-4 weeks of gestation.

These primitive cells can then be detected in the circulation from 4 weeks.
