### **Identifying an Unknown Compound by Solubility Functional**

Many compounds have similar physical properties and give similar results in qualitative tests. However, an unknown can undergo reaction to form another compound called a derivative. The melting point of the purified derivative allows identification of the unknown. In this lab we will focus on using Solubility Tests, Chemical Tests and Spectra Analysis to identify two unknown compounds

### **Melting Points UMass Amherst**

melting point is a physical property of a solid and can be used to help identify a substance. In practice, a solid usually melts over a range of temperatures rather than at one specific temperature. For this

reason it is more useful to speak of a melting point range. Although the term "melting point" is usually used, what is meant is "melting point range". If the compound melts over a very

Then after reading the information about compounds, conclude with your team if each compound is ionic or covalent, or is it more in between. Document this information in the last column of your data table. Then (in your conclusion) compare your findings for each compound with what you now know about the ionic vs. covalent nature of each compound. Make sure this information is clear in your conclusion.
